

# Inside Messenger RNA COVID-19 Vaccines

COVID-19 vaccines developed by **Pfizer-BioNTech** and **Moderna** use messenger RNA (mRNA) to stimulate a response from your immune system. Each vaccine delivers a combination of active ingredients and components to help your body build protection against the disease.

\*Both mRNA COVID-19 vaccines include polyethylene glycol (PEG) 2000, a lipid known in rare cases (less than .001%) to cause anaphylaxis in vaccine recipients.

No change to DNA

No eggs or other animal products

No human blood products

No latex

No live virus

No microchip

No preservatives

- Both mRNA COVID-19 vaccines are **95% effective** after two full doses.
- You should receive two doses of the **same** mRNA vaccine.
- Maximum protection begins **14 days** after your second dose.
